Solar array mounted on a rooftop. A solar panel is a device that converts sunlight into electricity by using photovoltaic (PV) cells. PV cells are made of materials that produce excited electrons when exposed to light. The electrons flow through a circuit and produce direct current (DC) electricity, which can be used to power various devices or be stored in batteries.

Zetwerk Manufacturing announced that it has secured a substantial second order from NTPC, India's largest power company. The order is for the manufacturing and supply of 1515 MWp of ALMM-compliant, Made in India solar PV modules, including mandatory spares, for the 1200 MW Khavda Solar project in the western Indian state of Gujarat.

Photovoltaic (PV) systems have paved their way into general households due to their high efficiency, low deployment cost and huge power savings. These advantages combined with Government incentives further assist in wide-scale adoptability of the solar powered systems. PV systems generate direct current (DC) outputs, which needs to be converted into alternating ...
