The PV inverters with the proposed method successfully handle this problem as the PV2 changes its output power to compensate the shortage power and the PV1 quickly tracks the desired operating point within 0.04 s. After that, the PV inverter stably operates until the load increases at 4 s and the power shortage is triggered again.

The LAC Solar pure sine wave inverter charger not only acts as a DC to AC inverter, but also charges and maintains a battery bank when connected to shore power. With a built-in 4-Stage (Bulk stage, Boost stage, Float stage, and Equalization) battery charger, it can optimally and automatically charge to 100%.

As mentioned, a 2kW solar PV system is on the small side for a solar system. The simple answer is smaller homes and houses, but there are other uses for a 2kW solar PV system too. If you live alone or as a couple and live in a smaller place ideally located for a solar system, then a 2kW solar PV system could meet all your needs.

Under-sizing Your Inverter. Using the graph above as an example, under-sizing your inverter will mean that the maximum power output of your system (in kilowatts - kW) will be dictated by the size of your inverter. Solar inverter under-sizing (or solar panel array oversizing) has become a common practice in Australia and is generally preferential to inverter over-sizing.
