DC power optimizers are physically identical to microinverters and also connect to the back side of a PV module. Where they differ from microinverters is their functionality. ... Being similar to micro inverter technology in some ways, optimizers are also classified as module-level power electronics (MLPE). In addition to monitoring each panel ...

Image: Enphase. Introduction. Micro-inverters and power optimisers are an upgrade on traditional PV system design, by maximising the electricity generated from each individual panel. They do this by shifting Maximum Power Point Tracking (MPPT) to the panel level. This is particularly beneficial on roofs with multiple orientations or shading, as the panels will have differing outputs.
