

The hybrid AC/DC microgrid is considered to be the more and more popular in power systems as increasing DC loads. In this study, it is presented that a hybrid AC/DC microgrid is modelled with some renewable energy sources (e.g. solar energy, wind energy), typical storage facilities (e.g. batteries), and AC, DC load, and also the power could be ...

These systems can function as a self-managed and can control its inner elements to eliminate negative effects on outer networks. Microgrid structure is classified into three categories: AC-microgrid, DC-microgrid and AC/DC ...

(DOI: 10.1016/J.RSER.2015.07.194) Microgrids have been widely studied in the literature as a possible approach for the integration of distributed energy sources with energy storage systems in the electric network. Until now the most used configuration has been the ac microgrid, but dc-based microgrids are gaining interest due to the advantages they provide ...

In this case, grid-following and grid-forming control strategies are analyzed for their implementation in hybrid ac/dc microgrids. Therefore, not only the control of DG and ESS ...

The depletion of natural resources and the intermittence of renewable energy resources have pressed the need for a hybrid microgrid, combining the benefits of both AC and DC microgrids, minimizing the overall ...

DC microgrids are gaining more importance in maritime, aerospace, telecom, and isolated power plants for heightened reliability, efficiency, and control. Yet, designing a protective system for DC microgrids is challenging due to novelty and limited literature. Recent interest emphasizes standalone fault detection and classification, especially through data-driven ...

In this sense, AC/DC hybrid smart microgrids constitute a newly-introduced research field with a variety of potential applications that combine the benefits of both AC and DC systems. ... The introduction of hybrid alternating current (AC)/direct current (DC) distribution networks led to several developments in smart grid and decentralized power system technology. The paper concentrates on several topics related to the operation of hybrid AC/DC networks. Such as optimization methods, control strategies, energy management, protection issues, and ...

Figure 1 - Example of a hybrid microgrid configuration. Although several control strategies can be found in the literature, there is a reduced number of them that directly focuses on hybrid ac/dc microgrids. In addition, the information around the strategies for hybrid microgrids is very disperse and has not been previously reviewed.

This paper investigates and compares different hybrid AC/DC microgrid configurations that are suitable for a net-zero energy community and indicates that the best ...

This paper proposes an EMS for a hybrid AC/DC microgrid based on an artificial neural network (ANN). The ANN is composed of a two-step process that operates the microgrid by outputting the operation mode and charging and discharging the ESS. ... Classification of microgrids with voltage type (a) AC; (b) DC; (c) hybrid AC/DC. Figure 2. Microgrid ...

Therefore, hybrid ac/dc microgrids are raising as an optimal approach as they combine the main advantages of ac and dc microgrids. This paper reviews the most interesting topologies of hybrid ac ...

The hybrid microgrid topology drastically reduces the number of PECs required followed with the cutting down of unnecessary losses due to power conversion (Ahmed et al., 2020, Nejabatkhah et al., 2019, Pati et al., 2017). The architecture of the hybrid AC/DC microgrid is depicted in Fig. 1.4.

The methodology involves training ANNs to accurately detect and classify faults while precisely calculating their locations within the intricate AC-DC hybrid architecture of Solar PV microgrids. The results demonstrate the effectiveness of the proposed approach in improving fault analysis, thereby contributing to the robustness and efficiency of renewable ...

The aim of this paper is to provide a comprehensive review of the available strategies for protection of hybrid AC/DC microgrids. Apart from describing the most relevant ...

This dissertation focuses on a hybrid microgrid planning model with the objective of minimizing the microgrid total planning cost and proposes a co-optimization generation and distribution planning model in microgrids in which simultaneous investment in generation, i.e., distributed generation and distributed energy storage (DES), and distribution is considered.

The basic structure of the multimicrogrids as to the voltage grade classification, AC/DC constitutional forms, and phase-sequence constitutional aspects are introduced in Reference 94. ... The primary and secondary control strategies ...

Hybrid AC/DC microgrids are raising as an optimal approach as they combine the main advantages of AC and DC microgrids [15], [16], [17]. The structure of a hybrid microgrid is depicted in Fig. 1. As can be seen in the figure, the hybrid microgrid is connected to the main grid via a Static Transfer Switch (STS).

The microgrid concept is gaining popularity with the proliferation of distributed generation. Control techniques in the microgrid are an evolving research topic in the area of microgrids. A large volume of survey articles focuses on the control techniques of the microgrid; however, a systematic survey of the hierarchical control techniques based on different ...

2.3 AC-DC Coupled Microgrid. As depicted in Fig. 4, whereas the DC bus is connected to the DC-generated DGs, and the AC bus is associated to the AC-generated DGs. The two buses are connected by the ILC. ILCs serve as bidirectional power converters, transferring power from an AC side to DC side.

The Hybrid AC/DC microgrid is the new idea of the researchers to complete the power demand in developing countries like India. Hybrid AC-DC microgrid consists of AC microgrid and DC microgrid which are connected using an interlinking converter. In this paper...
