In grid-connected photovoltaic (PV) systems, a transformer is needed to achieve the galvanic isolation and voltage ratio transformations. Nevertheless, these traditional configurations of transformers increase the weight, size, and cost of the inverter while decreasing the efficiency and power density. The transformerless topologies have become a good ...

Aotai offers nearly 100 welding machine models in 13 series. Its line of welding machine products includes Inverter MMA, Inverter TIG, Inverter MIG, Inverter SAW, Water Cooling Machine, Inverter Air Plasma Cutter as well as a variety of accessories. Its solar division was set up in 2009, mainly manufacturing on-grid and hybrid inverters.

With the above steps accomplished, the inverter system can be successfully connected to the grid. A block diagram showing the control of the grid-connection process is provided in Fig. 3 this chapter, we are mainly considering the current control problem for the grid-connected system, which occurs after this grid connection process is accomplished.

Three-phase electrical systems are subject to current imbalance, caused by the presence of single-phase loads with different powers. In addition, the use of photovoltaic solar energy from single-phase inverters increases this problem, because the inverters inject currents of different values, which depend on the generation capacity at a given location.
