How much does nmc111 battery cost?

NMC111 with equal shares of nickel, manganese and cobalt assumed here. Battery pack price of 130 USD/kWh assumed. Values in brackets show baseline raw material cost assumptions based on monthly average prices from 2010-2020.

Why are nickel-metal hydride batteries expensive?

Nickel-metal hydride batteries exhibit relatively high raw material cost due to large amounts of nickel. These batteries are also subject to commodity price fluctuations of nickel, leading to pack cost of 250 USD/kWh in the worst case.

Can lithiated nickel manganese cobalt oxide be produced by co-precipitation?

A process model has been developed and used to study the production process of a common lithium-ion cathode material, lithiated nickel manganese cobalt oxide, using the co-precipitation method. The process was simulated for a plant producing 6500 kg day⁻¹.

How will cathode technology change the price of cobalt metal?

As the cathode material technology matures, manufacturers will require less frequent design changes leading to longer plant life and lower depreciation costs. The price of cobalt metal has changed in the last six years from a peak of \$27 per kg to a low of \$22 per kg.

Why did NCM battery cell prices drop in May?

Asian nickel cobalt manganese (NCM) battery cell prices fell to their lowest level for the first time in over three years in May, retreating significantly from the peak seen in 2022. A combination of lower critical battery raw material prices, supply glut, a sluggish demand and improving technology has kept a tight lid on NCM [...]

How much does cobalt cost in 2022?

For example, the price of cobalt has fallen from roughly \$70,000 per metric ton in 2022 to about \$30,000 in 2024. Similarly, the price for lithium carbonate has fallen from a high of approximately \$70,000 per metric ton to well below \$15,000 in 2024.
