What's new at ESS?

With increasing cell capacity, ESS keeps transitioning to higher-capacity cells, 5 MWh+ containers, and 400 kWh+ all-in-one systems. These can also be seen this year. Additionally, some products targeting specific European applications were introduced.

How much does a MWh system cost?

MWh (Megawatt-hour) is a measure of energy capacity (how long the system can continue delivering that power output). For example, a 1 MW /4 MWh BESS has four hours of storage capacity. So, while the system might be \$200,000 per MW, the effective cost can be \$800,000 per MWh if it has four hours duration.

How much does Bess cost?

The cost of BESS has fallen significantly over the past decade, with more precipitous drops in recent years: This is nearly a 70% reduction in three years, owing to falling battery pack prices (now as low as \$60-70/kWh in China), increased deployment, and improved efficiency.
