

Can I change the lock cylinder of the locker myself

How do you change a lock cylinder?

Luckily, doing so can be easy as long as you have the right tools and follow the right steps. To change an interchangeable lock cylinder, remove the flat screw, turn the key slightly to the right, remove the cylinder, and, turning the key back to the left, place the new cylinder.

How do you replace a door lock cylinder?

Begin by removing the retaining screw which is located on the faceplate on the side of the door, usually in alignment with the bottom of the lock cylinder and keyhole. Next, insert the key into the lock. Once the key is in the lock, turn the key about 10 degrees to line up the cam with the body of the lock, and remove the cylinder slowly.

How do you tighten a door lock cylinder?

Screw the flat screw back in. Thread the screw into the hole with your fingers, then use a flathead screwdriver to tighten it. Continue turning it until it runs flush with the side of your door. Screwing in the flat screw will hold the lock cylinder in place. Test your key to make sure that it unlocks your door.

Can a cylinder lock be replaced with the original screw?

You can use the original screw if you want, just make sure that you try it in the new lock before you fit it to make sure the screw thread is the same. Put the key in the lock and push the cylinder through where the old cylinder lock was.

How do I fix a broken lock cylinder?

Screwing in the flat screw will hold the lock cylinder in place. Test your key to make sure that it unlocks your door. Keep the door open as you test it. If it doesn't work, try disassembling and reinstalling the lock cylinder or call a locksmith to see if they can replace it for you.

What if my lock cylinder has failed?

If your lock cylinder has failed and you cannot get a key in either side to move the cam you will need to snap the lock to remove it. First unscrew the door handles on both sides of the door. This will give you access to more of the lock cylinder.

To change the lock on a regular door knob, first use a screwdriver to remove the door knob and the old latch. Next, put a new latch in and replace the door knob.
