What is a smart microgrid?

Smart microgrids (SMGs) are small, localized power grids that can work alone or alongside the main grid. A blend of renewable energy sources, energy storage, and smart control systems optimizes resource utilization and responds to demand and supply changes in real-time 1.

What are the strategies for energy management systems for smart microgrids?

There are many strategies for energy management systems for smart microgrids such as load management, generation management, and energy storage management⁴. The control system of a microgrid must continuously analyze and prioritize loads to maintain a balance between power generation and consumption.

Can a microgrid supply power without a power grid?

The microgrid design is simulated using MATLAB Simulink. The results show that the microgrid can supply power to its community adequately and independently without relying on a utility power grid. The microgrid is smart as it can operate autonomously thanks to its automatic control system.

What are the components of a microgrid?

The system main components include a solar PV system, a battery, a diesel generator, an inverter, a control system, and loads. The microgrid design is simulated using MATLAB Simulink. The results show that the microgrid can supply power to its community adequately and independently without relying on a utility power grid.

How can a smart microgrid improve safety?

To further fortify the smart microgrid's safety, a theft detection device that tracks the gap between electricity withdrawal and consumption has been implemented. The proposed system also included the management of inverter and smart meter-connected loads, allowing for flexible responses to power outages.

How smart microgrid system can reduce the stress on the main grid?

The performance study of the smart microgrid system with the intelligent integrated FLC, which incorporates tariff and power flow management and can lessen the stress on the main grid, is explained using a MATLAB simulation modeling in Section 3.2.
