Clouds in the sky can significantly affect full-disk observations of the Sun. In cloud-covered full-disk H  $\alpha$  images, certain solar features become obscured, posing challenges for further solar research. Obtaining both cloud-covered and corresponding cloud-free images is often challenging, resulting in poor alignment of image pairs in the dataset, which ...

In the context of escalating concerns about environmental sustainability in smart cities, solar power and other renewable energy sources have emerged as pivotal players in the global effort to curtail greenhouse gas emissions and combat climate change. The precise prediction of solar power generation holds a critical role in the seamless integration and ...

SDSS has been proposed as a promising eco-friendly technology for commercial clean power generation and smart grid distributed applications. The concept of harvesting solar energy in the SDSS is employed using a dish concentrator, which receive and concentrate the direct solar radiation on the cavity receiver (Aboelmaaref et al., 2020).The ...
