What is distributed solar photovoltaics (PV)?

Distributed solar photovoltaics (PV) are systems that typically are sited on rooftops, but have less than 1 megawatt of capacity. This solution replaces conventional electricity-generating technologies such as coal, oil, and natural gas power plants. In a PV system, a solar cell turns energy from the sun into electricity.

Can a PV system be installed on a house?

PV is very modular. You can install as small or as large a PV system as you need. Example: One can install a PV module on each classroom for lighting, put PV power at a gate to run the motorized gate-opener, put PV power on a light pole for street lighting, or put a PV system on a house or building and supply as much energy as wanted.

What percentage of the solar PV market will be distributed?

Based on estimations of the future solar PV market, we assumed that distributed PV installations will represent around 40 percent of the solar PV market in 2050, with the Utility-Scale Solar Photovoltaics solution capturing the remaining 60 percent (US DOE, 2012; IEA, 2014).

How to plan a PV installation?

Surface Area: The surface area of the site at which the PV installation is intended should be known, to have an estimation of the size and number of panels required to generate the required power output for the load. This also helps to plan the installation of inverter, converters, and battery banks.

When can new PV modules be added?

New PV modules can be added at any time. Photovoltaic (photo = light; voltaic = produces voltage) or PV systems convert light directly into electricity using semi-conductor technology. (@10% efficiency) Thermal systems (hot water, pool heaters) produce heat from the sun's radiation (@+40 % efficiency) Large difference in value of energy types.

What is a solar PV system?

This solution replaces conventional electricity-generating technologies such as coal, oil, and natural gas power plants. In a PV system, a solar cell turns energy from the sun into electricity. Solar cells can be divided into three generations.
