What is an energy storage system (ESS)?

Energy Storage System (ESS) As defined by 2020 NEC 706.2, an ESS is "one or more components assembled together capable of storing energy and providing electrical energy into the premises wiring system or an electric power production and distribution network." These systems can be mechanical or chemical in nature.

What is a battery charge & discharge?

Charging is the act of adding energy to a battery or storage system. Matching the charging source, such as a solar PV system, to the storage system is fundamental to the load analysis exercise as chronic overcharging or undercharging are detrimental to an ESS's longevity, especially for lead-acid batteries. Discharge

What is battery ESS?
