

How to make a solar warning light bracket

How do I install a security light?

Place the bracket into position and screw it flush to the wall. Assemble the security light as required. Fit the light to the bracket and screw it securely on with the fixings provided. With the light securely attached to the wall, read the product fitting instructions and set the light up, adjusting the timer, sensor and solar panel as required.

How do you fix a light on a brick wall?

Remove the fixing bracket from the light with a crosshead screwdriver. Using the appropriate ladder for the job, mark the bracket position onto the wall and use a spirit level to check it is level. If your wall is a brick wall, mark the fixing points on to the mortar joints rather than the brick.

How do you install solar LED lights on a wall?

Peel the adhesive liner off the back of the lights and stick them to your wall or ceiling. Tip: If the lights aren't long enough reach your desired mounting location, use a USB extension cable. Test out your snazzy new DIY solar LED lights by pressing the bottom button on your charge controller to turn them on.

Can a solar powered floodlight be used as a security feature?

Solar powered floodlights can be used as a security feature but also to illuminate your garden paths, help you see who's calling at night, or to make the most of your patio on long summer evenings. The solar panel charges the internal batteries during the day, and at night the security light illuminates when it detects motion.

Where should a solar powered floodlight be installed?

Ideally the solar panel should be installed south facing and in the sun for as much of the day as possible. This guide will take you through what you need to do to fit your solar powered floodlight safely and securely. Before you start, have a look at the best place to install your solar-powered light.

How do I know if my solar panel is charging?

The battery icon on the charge controller should start flashing to let you know that the solar panel is safely charging the battery. Your solar panel is now properly connected and safely charging your battery! Plug the lights into the USB port on the charge controller. Change the charge controller's load setting to 15.
