How is solar energy converted to electricity?

Energy from sunlight or other renewable energy is converted to potential energy for storage in devices such as electric batteries or higher-elevation water reservoirs. The stored potential energy is later converted to electricity that is added to the power grid, even when the original energy source is not available.

Solar Energy UK chief executive Chris Hewett said: "With longer and sunnier days, solar power produces high yields of energy, some of which will be stored in batteries for later use. Summer in the UK can often bring unpredictable weather which is why solar generation works well in tandem with other renewable energy sources, such as wind.
