Do you need planning permission to install solar panels on your roof?

An increasing number of people are investing in solar energy. More and more homes are having solar panels, or solar tiles, installed on their roofs. Of course, with such installations, the topic of planning permission and building regulations often comes to the surface.

Are solar panels legal?

However, it's crucial to understand that while installing solar panels is legal, certain conditions must be met. For most domestic properties, solar panel installations are considered a "permitted development" and do not require planning permission, provided they respect certain size criteria.

Can solar panels be built without permission?

This is because they generally fall under permitted development rights, which allow homeowners to make reasonably sized changes without getting permission. The exceptions to this rule are typically flats, listed buildings, homes in conservation areas, and ground-mounted installations. What are the building regulations for solar panels?

Do solar panels need planning permission in the UK?

In the UK, the installation of solar panels is subject to both planning permission and building regulations approval. While planning permission focuses on the aesthetics and impact of the installation on the local environment, building regulations primarily deal with the technical aspects of the installation.

Do solar panels need Building Regulations approval?

Building regulations approval is mandatory for solar panel installations in the UK. The approval process ensures compliance with safety, structural, and electrical standards. It verifies that the installation is carried out by competent installers and that all relevant regulations are adhered to.
