To create a solar panel fixing bracket, the first step is to design the metal stamping die of the fixing bracket on a computer. This design is then sent to a machine called a stamping press. After the metal stamping dies of the fixing bracket are designed, the second step is die assembly, testing, and proofing: The stamping press uses a die and punches set to cut ...

Solar panels may be mounted on a pole, a ground support, a wall of a building, a building or vehicle roof, or on a boat deck. The main considerations are day long access to unobstructed sunlight and wire lengths to batteries. Appearance and ease of access for any cleaning etc. should also be considered.
