It is a chemical process that releases large amounts of energy. Thermal runaway is strongly associated with exothermic chemical reactions. If the process cannot be adequately cooled, an escalation in temperature will occur fueling the reaction. Lithium-ion batteries are electro-chemical energy storage devices with a relatively high energy density.

Energy density is measured in watt-hours per kilogram (Wh/kg) and is the amount of energy the battery can store with respect to its mass. Power density is measured in watts per kilogram (W/kg) and is the amount of power that can be generated by the battery with respect to its mass. To draw a clearer picture, think of draining a pool.
