Are battery storage costs based on long-term planning models?

Battery storage costs have evolved rapidly over the past several years, necessitating an update to storage cost projections used in long-term planning models and other activities. This work documents the development of these projections, which are based on recent publications of storage costs.

Is battery storage a viable option for off-grid applications?

Market trends indicate a continuing decrease in the cost of battery storage, making it an increasingly viable option for both grid and off-grid applications. According to some projections, by 2030, the cost of lithium-ion batteries could decrease by an additional 30-40%, driven by technological advancements and increased production.

What will the future of battery technology look like in 2030?

By 2030, total installed costs could fall between 50% and 60% (and battery cell costs by even more), driven by optimisation of manufacturing facilities, combined with better combinations and reduced use of materials. Battery lifetimes and performance will also keep improving, helping to reduce the cost of services delivered.

Are battery electricity storage systems a good investment?

This study shows that battery electricity storage systems offer enormous deployment and cost-reduction potential. By 2030, total installed costs could fall between 50% and 60% (and battery cell costs by even more), driven by optimisation of manufacturing facilities, combined with better combinations and reduced use of materials.

How has the cost of battery storage changed over the past decade?

The cost of battery storage systems has been declining significantly over the past decade. By the beginning of 2023 the price of lithium-ion batteries, which are widely used in energy storage, had fallen by about 89% since 2010.

Does battery storage cost reduce over time?

The projections are developed from an analysis of recent publications that include utility-scale storage costs. The suite of publications demonstrates wide variation in projected cost reductions for battery storage over time.
