How do I charge a solar panel battery?

o Switch off or disconnect all loads. When power from PV is available the battery status will show Charging, and the Grid (the red box on the left of the overview) will be slightly fluctuating around 0W (zero watts). After configuring this item, the system will immediately start charging the battery. First, disconnect the mains.

How do I prevent a solar charger from feeding energy to the grid?

Policy 4: Prevent feeding energy to the grid: There are two options here; first - use ESS, but do not enable Solar charger excess feed-in and it will always be connected to the grid. Or, use the Virtual Switch with ignore AC-Input. Policy 5: Connected to mains, no feedback: Use ESS, select the "Keep batteries charged" mode.

How do I charge a generator battery?

The battery will be charged from both the mains and from PV. In the Settings -> ESS menu, the Zero feed-in active item shows 'Yes'. Start the generator and check that the system begins to charge the batteries. 6. Controlling depth of discharge (Note: All absolute voltages mentioned in the example below refer to a 12V system).

What type of inverter/charger does the energy storage system use?

The Energy Storage System uses a MultiPlus or Quattro bidirectional inverter/charger as its main component. Note that ESS can only be installed on VE.Bus model Multis and Quattros which feature the 2nd generation microprocessor (26 or 27). All new VE.Bus Inverter/Chargers currently shipping have 2nd generation chips.

How do I feed-in PV power via an MPPT solar charger?

Feed-in of PV power via an MPPT Solar Charger can be enabled or disabled in the Energy Storage Systems menu on the CCGX. For grid-tie inverters, the only option is to use a Fronius grid-tie inverter and use the Fronius Zero Feed-in function.

How do I charge a generator on a GX device?

On the GX device, select 'Generator' as the AC Input type in the Settings -> System setup menu. The system will then enable generator charging, ensure that the generator is properly loaded, and will be automatically shut down as soon as parameters are met. ESS can be used with or without an external grid meter.
