Batteries suffer from low power density but have higher energy storage density [5]. SCs, on the other hand, suffer from low energy density but are characterized by higher power density and a longer cycle life [6, 7]. The combination of the two technologies is a viable method to improve the performance of standalone power systems with renewable energy sources.

Lithium-ion batteries are a very promising storage technology especially for decentralized grid-connected PV battery systems. Due to several reasons, for example, safety aspects, the battery management is part of the lithium-ion battery system itself and is not integrated into the battery inverter or the charge controller as it is usual for lead-acid and nickel-based batteries.
