

Photovoltaic panel controller 36v

To charge the 36V/48V battery bank with either PWM or MPPT charge controller, the solar panel voltage should be more than 36V/48V. But in some cases, you may only have just one single 12V or 24V solar panel to charge a 36V or 48V battery bank, especially when you would like to charge batteries in places with limited space for solar, such as a golf cart.
