The ratio of solar PV supply to power grid supply varies, depending on the size of the solar PV system. Whenever the solar PV supply exceeds the building's demand, excess electricity will be exported into the grid. When there is no sunlight to generate PV electricity at night, the power grid will supply all of the building's demand.

Solar Panel Size: Power Output (Wattage) Solar panel size refers to the amount of power a solar panel can produce over a given time. It's stated in wattage - the voltage multiplied by amperage ($V \times A = W$). Voltage is the rate of speed/pressure of electrons moving through an electrical circuit.

Key Takeaways. Evaluate personal energy usage against the 10,632 kWh national household average for tailored solar solutions. Use local peak sunlight hours in conjunction with a solar panel size estimator for an accurate system size.; Monocrystalline panels are recommended for higher efficiency on smaller rooftops.
