The photovoltaic effect is a process that generates voltage or electric current in a photovoltaic cell when it is exposed to sunlight. It is this effect that makes solar panels useful, as it is how the cells within the panel convert sunlight to electrical energy. The photovoltaic effect was first discovered in 1839 by Edmond Becquerel.

Monocrystalline solar panels are the most cost-effective option. Perovskite panels are more efficient and will be on the market soon . Thin film panels are the cheapest, most versatile choice. It's confusing enough trying to find solar panel prices, never mind choosing between the different types of solar panels to pick the right one for your home.

The typical lifespan for a solar panel installation is 25 to 30 years. As part of our standard installation package, you'll get a 24 month installer warranty, 15 year manufacturer warranty on solar panels, a 10 year inverter warranty (the inverter converts the electricity you generate into electricity you can use), and a 30 year performance ...
