A completely different type of technology to photovoltaics, solar thermal collectors are used to convert solar energy into useful hot water. Photovoltaic panels consist of solar photovoltaic cells connected together in a string. They are encased in a special glass which optimises the passing of light energy from the atmosphere to the solar ...

Solar panel: Solar panels are those devices which are used to absorb the sun's rays and convert them into electricity or heat. Description: A solar panel is actually a collection of solar (or photovoltaic) cells, which can be used to generate electricity through photovoltaic effect. The main particle of a solar cell is silicone.

Activesol PV panels are extremely light and durable. They are specially designed for means of transportation and are perfect as an independent source of electricity for boats, yachts and RVs. Thanks to being lightweight, they can be installed almost anywhere. Activesol is a travel companion full of energy!
