Suppose the solar array generates too much energy that exceeds the energy storage maximum of the battery. In that case, the solar charge controller ensures that power is not injected into the battery, avoiding an overload. This energy is lost by a process known as the Joule effect, which generates heat.

Renewable energy sources are widely used nowadays due to their contribution to the mitigation of environmental pollution. Among the most demanded options are photovoltaic solar energy systems, whose purpose is to meet the energy demand in rural areas without access to the electricity grid.
