Semi-automatic solar panel laminators combine manual and automated processes. Operators manually load the solar cells, encapsulant materials, and cover sheets into the machine. The machine then automates certain tasks, such as temperature control and pressure application, but still requires human intervention for loading and unloading components.

We started to develop solar panel recycling technology in 2013, to solve this problem. Recycling glass, weight of which takes around 70 to 80 percent of a panel, is impossible if there are metals. After crushing a panel as an industrial waste, it is extremely difficult to separate glass from metals.

Large-area solar PV installations help to reduce production costs. Saudi Arabia put out tenders for a 300 MW plant in February 2018, which would produce solar energy at the world's lowest price of 0.0234 USD/kWh [6]. Solar energy prices have rapidly reduced because of developments in solar technologies.
