How does solar power work?

The solar electricity seeks to convert light from the sun directly into electricity through a process known as photovoltaic. Photovoltaic system may be categorized as stand-alone photovoltaic system, photovoltaic system for vehicle applications (solar vehicles), grid-connected photovoltaic system and building systems.

How solar energy is generated?

The PV technology convert visible spectrum to electricity and thermal collectors use both infrared and visible spectrum for energy generation. So the energy generation from solar radiation can be in the form of electrical energy or thermal Energy. The various conversion paths of solar energy is described in the Fig.2

What is solar power?

Solar power is the conversion of sunlight into electricity, either directly using photovoltaic (PV), or indirectly using concentrated solar power (CSP). The research has been underway since very beginning for the development of an affordable, in-exhaustive and clean solar energy technology for longer term benefits.

What is solar photovoltaic (PV) power generation?

Solar photovoltaic (PV) power generation is the process of converting energy from the sun into electricity using solar panels. Solar panels, also called PV panels, are combined into arrays in a PV system. PV systems can also be installed in grid-connected or off-grid (stand-alone) configurations.

How TE devices can be integrated into solar power generation systems?

TE devices can be integrated into solar power generation systems to collect heat from (1) the cooling system of PV solar panels simply by combining TE modules to collect waste heat from the coolant; or (2) using a sun beam splitter to absorb heat from solar radiation apart from the PV system.

How can solar energy be harnessed?

This energy received from the sun can be harnessed directly or indirectly using various technologies for thermal applications as well as for converting into electricity by the means of photovoltaic (PV) systems. Over the years the photovoltaic technology advanced a lot and the efficiency of solar cell has considerably improved.
