

Repurposing old mobile phones to generate solar power

Can a smartphone be repurposed?

Unfortunately, after 2015's PuzzlePhone (died: 2017) and Google's Project Ara (killed in 2016), there have been no significant attempts to make smartphones in general into a modular, easily repairable system. This - along with the traditional locked bootloader - significantly limits any reuse attempts.

Can old smartphones be recycled?

Yet even within formal recycling facilities, only part of an old smartphone is truly recycled. For example, a massive problem is and remains plastics, many of which are highly resistant to recycling, especially when the economics of recycling plastics is taken into account.

Who benefits the most from solar-powered mobile devices?

Similarly to residential solar systems, the people who benefit the most from solar-powered mobile devices are those who have no access to electricity. African countries count the lowest numbers of people with electricity, and yet millions of people still use cell phones.

Could solar-powered cellphones make a difference?

"Deforestation accounts for more greenhouse gas than all the world's planes, trains, cars, trucks, and ships combined," White says. These statistics convinced him that his reconfigured, solar-powered cellphones could make a difference. "Topher kept talking about doing it," recalls his wife, Annie Olivier.

Can you use old phone batteries as a powerbank?

Reuse Old Phone Batteries As a Powerbank (earth Day Part 1): I guess you probably also belong to the majority of the world's population that owns a smartphone and you probably had more than one during the past few years of smartphone evolution. With them, come used lithium ion batteries that you can not just k...

Can solar panels be used on mobile devices?

The latest innovations in solar energy, such as the introduction of flexible panels, have made it a much more versatile technology that opens up a whole world of applications. Applying solar panels to mobile devices would have the obvious benefit of removing (or lowering) the need for wall chargers, but the technology is not quite there yet.
