Can mutation adaptive differential evolution optimize the configuration of off-grid sapv system?

In this study, a new mutation adaptive differential evolution (MADE) based on a multi-objective optimization algorithm is presented to optimize the configuration of the off-grid SAPV system. Three conflict objectives are normalized, weighted, and then aggregated by mono-objective function to optimally size the off-grid stand-alone PV system.

How to choose the optimal configuration of a stand-alone PV system?

A MADE sizing method is proposed to choose an optimal configuration of the stand-alone PV system. The hourly meteorological data for one year in Klang Valley recorded by Subang Meteorological Station is utilized in the optimization process with latitude (3.12 °) north and longitude (101. 6 °) east.

What is the optimal configuration of sapv system based on lithium-ion battery?

Besides, the optimal configuration of the SAPV system based on the lithium-ion battery consists of 380 PV modules and 6 storage batteries. On the other hand, the optimal configuration based on the hybrid method in Table 8 (B) has 5 less than the total number of the PV modules using MADE algorithm at the same number of the storage battery.
