Can a photovoltaic module be installed outside?

Photovoltaic modules are designed for outdoor use. Modules may be mounted on ground, rooftops, vehicles or boats. Proper design of support structures is the responsibility of the system designers or installers. Mounting holes or clamp range and numbers suggested in this manual shall be used.

Which method should a PV installer use?

Meet the requirements of the building regulations. Generally those involved with PV installation work will want to use method 2 or employ contractors who use method 2 as method 1 can be expensive and time consuming. When registering with a competent person's scheme, an installer

Can a DynoBond™ be used to ground a PV module?

The DynoBond™ is engineered for commercial and residential applications. Solar Stack racking system may be used to ground and/or mount a PV module complying with UL 1703 only when the specific module has been evaluated for grounding and/or mounting in compliance with UL 1703.

Who should install solar photovoltaic systems?

Installing solar photovoltaic systems require specialized skills and knowledge. Installation should be performed only by qualified persons. Installers should assume the risk of all injuries that might occur during installation, such as electric shock.

Can a solar module be covered with plastic film?

During normal work, materials such as plastic film and waterproof cloth are forbidden to be covered on the glass surfaces of modules. Broken solar module glass is an electrical safety hazard (may cause electrical shock or fire). These modules cannot be repaired and should be replaced immediately.

How should a PV system be designed & installed?

From the outset, the designer and installer of a PV system must consider the potential hazards carefully, and systematically devise methods to minimise the risks. This will include both mitigating potential hazards present during and after the installation phase.
