6v solar panels are the same high quality as our 12v panels however they have been configured perfectly to charge 6 volt batteries. Sunstore's 6v solar battery chargers can be attached to any 6v battery as a trickle charger. Motorcycles and older cars often have 6v systems and can be charged with our 6v solar panels.

36-Cell Solar Panel Output Voltage = $36 \times 0.58V = 20.88V$. What is especially confusing, however, is that this 36-cell solar panel will usually have a nominal voltage rating of 12V. Despite the output voltage being 18.56 volts, we still consider this a 12-volt solar panel. What gives? Which is the correct voltage; 12V or 20.88V?

A solar panel that comes the mind is the LG NeON 2, these panels have a V_{mp} of 41 Volts. If you parallel 3 of these panels you should max the unit out. You can also try to get like 6 12V-200W solar panels from Renogy. These panels are rated at 19.2 Volts for their V_{mp} , so if you connect them in a 2S3P configuration, they should max out the f3800.
