What are small solar panels?

Small solar panels are physically smaller and produce less electricity than traditional solar panels. They are most often used in off-grid or portable energy applications. Small solar products are another term for these panels. Most manufacturers who produce traditional solar panels do not also produce panels of these smaller sizes.

How big are solar panels?

Solar panels can vary in size depending on the manufacturer, but they're bigger than you might think. On a house, they look relatively small, but each panel is around 1.6 metres tall by one metre wide.

How to choose a small solar panel?

You can get a small monocrystalline solar panel that is pure silicon made from a single silicon crystal. It is quite efficient and cost-effective. Or you can have a cheaper small solar panel by investing in a polycrystalline solar panel which is moderately efficient.
