According to the International Energy Agency, there are some circumstances where solar photovoltaic (PV) is now the cheapest electricity source in history. ⁴ This is because the price of solar has fallen sharply around the world - including in the UK, where the cost of installing solar panels has decreased by 60% since 2010. ⁵ The efficiency of solar panels and ...

The most recent data says that solar accounts for around 4% of Britain's total electricity generation, up from 3.1% in 2016. Solar power is the third most generated renewable energy in the UK, after wind energy and biomass. The UK is the third largest producer of solar energy in the EU, behind Germany and Italy.

The annual generation of a solar PV system also varies with location in the country. This is due to variations in the level of solar radiation which reaches the ground. Figure 5 shows a map, with parts of the country which have higher levels of solar radiation coloured in red and orange and those with lower levels in blue.
