How to recycle photovoltaic modules?

Mechanical recycling method is used for complete photovoltaic modules. Recycling process includes mainly mechanical and hydrometallurgical processing. PV modules are first crushed in the crusher and then shredded to the desired pieces of approximately 4 to 5 mm size. The PV module lamination is damaged in this way.

What are thin-film PV panels?

Thin-film PV panels consist of critical minerals such as In, Ga, Se, Te and toxic Cd materials, among other components of the solar cells. It is of utmost importance to recycle these minerals from obsolete modules in order to maintain the availability of secondary raw materials to sustain second-generation PV technologies.
