Do micro- and small enterprises have a grid connection in North India?

Micro- and small enterprise surveys from rural North India are analysed (N = 2,004). 34% of MSEs have no grid connection, despite complete village electrification. Variation in grid reliability did not explain connection rates nor low consumption. Electricity policy reform targeting productive use must consider wealth constraints.

Is revenue village grid supply reliability a determinant of rural MSE grid connection?

The effective exclusion of revenue village grid supply reliability as a determinant of rural MSE grid connection and utilisation in our sample provides a starting point into understanding electricity needs and growth constraints of micro- and small non-farm enterprises in rural northern India.

Do micro- and small-enterprises use electricity in rural northern India?

In this paper, we contribute new evidence describing electricity use among micro- and small-enterprises (MSEs) in rural northern India. Puzzlingly, 34% of the 2,004 MSEs surveyed have no grid-connection despite almost complete village grid electrification.

Will mini grids provide electricity to 500 million people by 2030?

Mini grids have the potential to provide electricity to as many as 500 million people by 2030, with the right policies and about \$220 billion of investment to build around 210,000 mini grids. Over the past decade, mini grid costs have declined significantly, while the quality of service has increased.

How do power outages affect small-scale enterprises?

Key findings emphasize the critical need for effective strategies to mitigate the adverse effects of power outages on small-scale enterprises and their repercussions on poverty levels. MSMEs, serving as the cornerstone of Sub-Saharan African economies, face significant burdens due to power outages.

What are micro and small enterprises?

Micro and small enterprises comprise the largest part of the economy and significantly impact its development. Concerning the broad scope of their activities, these entities are characterized by a specific owner-manager relationship.
