A solar power induction cooker is a type of solar cooker that uses solar energy to heat food. It is a portable, solar-powered cooker that can be used to cook food for one or two people. It works by absorbing solar radiation and converting it into heat energy, which is then used to cook food.The solar power induction cooktop is a clean, efficient, and environmentally-friendly way to cook food.

Hello folks, Could the installation of a solar PV system be responsible for an induction hob not being able to work properly? So far as I know, the hob is on a different circuit to the solar PV system and my understanding is that, if more power than can be supplied by the batteries and inverter is needed, then more will be drawn from the grid.
