We've divided our selections for best water storage containers into two categories: long-term water storage tanks and portable water containers. Long-term water storage tanks are much larger (50 - 500 gallons) and are meant to keep vast amounts of water safe for long periods of time. These are the types of water tanks you'd keep stored away in a ...

This is typically a very project-specific factor. The installation location typically refers to whether or not the pump is installed inside the storage tanks (submersible water pumps) or outside the tanks (boosters/jets). Each rainwater harvesting pump style has its own benefits.

Cold water booster pumps are designed to supply potable water to single or multiple properties where mains pressure is low or water storage is required. ... Did you know we do Bespoke Large Chemical Storage Tanks. 1500 Litre ...

AquaPod Mini, The Complete Underground 2000 Litre Coldwater Boosting System The AquaPod Mini is a complete tank and pump assembly for residential or smaller office developments, with ...

A booster pump boosts water pressure and, in many cases, improves flow rate. Cold water booster pumps are designed to supply potable water to properties where mains pressure is low or water storage is required.

Water storage tanks have fluctuating water levels, creating a need for a booster pump with dry-run protection. As water storage tanks can contain debris and impurities such as mud and leaves, we recommend installing a floating strainer that will ensure that impurities sink to the bottom, while the cleanest water at the top will be used. The ...

Both types of pumps (transfer or on-demand) can be a submersible or external pump. It just depends on the design of the specific pump. Submersible pumps will be located inside your storage tank and external pumps will be located outside of the tank (likely near the electrical outlet). A benefit of submersible pumps is that some of them come ...

Water authority bylaws prevent a pump from being connected directly to the water supply, so a tank must be incorporated into the design when a water booster set is installed. The capacity of the tank will depend on water usage, and we can design and ...
