How far can the MG EHS plug-in hybrid drive?

With a fully charged battery, the MG EHS Plug-in Hybrid can cover a distance up to 52 kilometres purely electric and thus emission-free, according to the WLTP test method. That's more than the approximately 40 kilometres Europeans use to drive on average per day. The top speed in EV mode is electronically limited to 130 km/h.

How does a MG2 motor work?

MG2 drives the wheels with electrical power generated by the engine and MG1. This is the motor portion of its 'motor generator' capabilities. Like any electrical motor, MG2 provides a smooth (nearly imperceptible) acceleration from standstill to forward (or reverse) motion.

How to maintain a MG car?

o Maintain the vehicle in accordance with MG recommendations. Dirty air filters, oil etc., will reduce the engine's performance and raise fuel consumption. **STARTING & DRIVING** Driving in Special Environment Driving in Rain or Snow Emergency braking, accelerating and steering on slippery roads will reduce the vehicle's handling performance and grip.

What is the battery capacity of the MG EHS plug-in hybrid?

The battery of the MG EHS Plug-in Hybrid, which has been expertly concealed and takes up hardly any luggage space, has a capacity of 16.6 kWh. With its 3.7 kW on-board charger, it takes around 4,5 hours to fully charge the battery at a public (AC) charging point. The plug-in hybrid SUV is also fitted with a regenerative braking system.

How does Mg2 regenerative braking work?

During regenerative braking, MG2 acts as a generator, converting kinetic energy into electrical energy, storing this electrical energy in the battery, driving the engine (when an engine braking mode is enabled), or dissipating the electrical energy as heat (when the batteries are fully charged).
