How do I choose the right solar panels?

Choosing the right solar panels can make a significant difference to the efficiency and longevity of a solar PV system. Here are a few things to consider: Efficiency rating: Panels with a higher efficiency rating will generate more electricity in less space. But they usually cost more.

How do I design a solar PV system?

When designing a solar PV system, there are a number of important factors to consider: Orientation - the direction the system will face (e.g. south, east/west). For existing buildings with sloping roofs, this is clearly fixed and will influence the viability of installing solar (north-facing is not worthwhile in the UK).

What questions should you ask before installing solar panels?

Our head of solar, Scott Duncan, answers all the important questions you might have before deciding to install solar panels. 1. How do solar panels work? Solar power uses a process called the photovoltaic effect, which turns the sun's radiation into electricity. Solar panels are made up of lots of photovoltaic cells containing silicon.
