Are solar and wind renewable energy a good idea?

Renewable energy from solar and wind has found a considerable following within the population despite some large companies not seeing the benefit*. In affluent countries, renewable energy is a significant contributor to the country's power generation numbers. In the developing world, individuals are seeing the use of being independent of the national grid.*

Has solar power had its 'day in the sun'?

Solar power has not yet had its 'day in the sun', but it's expected to do so soon. With the climate crisis being a major consideration in energy generation today, it's no surprise that solar power is receiving a lot of positive attention.

While wind and solar often dominate conversations about low-carbon electricity, hydropower provides much more electricity worldwide than any other low-carbon energy source--nearly eight times more than solar power and 1.5 times more than nuclear.
