The levelized cost of electricity (LCOE) is a metric for the average cost of power generation. The LCOE is the ratio of all costs divided by the generated electricity produced over the lifetime of the plant. It therefore captures declines in costs and also technological improvements in the form of higher capacity factors. Note that LCOE is a ...

With attributes of flexibility, power and compactness, the SWF electric chain hoist is ideal for use in wind energy turbines. Compact dimensions and a standard lifting height of up to 140 metres are perfect prerequisites. High lifting speeds and safety clutch as overload protection guarantee safe and efficient operation.

Wind Hoist Power Generation

productionEconomicsImpact on environment and landscapePoliticsSmall-scale wind power is the name given to wind generation systems with the capacity to produce up to 50 kW of electrical power. Isolated communities, that may otherwise rely on diesel generators, may use wind turbines as an alternative. Individuals may purchase these systems to reduce or eliminate their dependence on grid electric power for economic reasons, or to reduce their carbon footprint
