05/31 How solar panels work Solar panels are devices that utilize the power of the sun to generate electricity. These panels are composed of multiple photovoltaic (PV) cells made of silicon and other materials.

Rooftop photovoltaic (PV) power generation is an important form of solar energy development, especially in rural areas where there is a large quantity of idle rural building roofs.

In 1982, Goetzberger et al. proposed the concept of integrating solar energy conversion with crop cultivation, suggesting that synergistic development of photovoltaic power generation and agriculture could be achieved by raising the height of photovoltaic panels and optimizing inter-panel spacing . This concept was implemented in 2011, when Dupraz et al. ...
